INSTRUCTIONS FOR USE

Shake the container well before using the product. Carefully open the container, measure the quantity of product with a plastic measuring cylinder or any other suitable graduated utensil; combine the product in a bucket with water, shake, and then add to the application tank.

Yasonte® is an inoculant formulated with *Bacillus* sp. spores, stimulates the rapid colonization of roots of agricultural, horticultural, forestry, ornamental and turf species. The application of Yasonte® is recommended in the morning or in the evening to avoid temperatures exceeding 35°C. Use Yasonte® on the following crops:

CROPS	DOSE (L/ha)	APPLICATION PERIOD
Tomato, Zucchini, Melon, Cucumber, Watermelon, Garlic, Onion, Asparagus, Broccoli, Cauliflower, Lettuce, Turf, Ornamentals and Trees	1, 2 and 3 L /200 L of water for root ball dipping	Apply once at the time of repotting.
	1, 2 and 3 L / 300 L of water in drench	Apply 2 to 3 drench applications to the base of the seedling at 14 day intervals.
